INF10025

Learning Summary Report

Student Guide

A clear guide to choosing your target grade, completing the template, linking evidence to the ILOs, and writing a meaningful reflection.

Based on the official INF10025 Learning Summary Report template and Assessment Criteria

IMPORTANT

Part 1 is compulsory for every student. If Part 1 is not submitted or is not completed satisfactorily, the unit result may be Fail, regardless of other completed Tasks or Tests.

1. Before You Start

Open the following items before completing the report:

- [ ] The Learning Summary Report template.
- [ ] Your Canvas grade page.
- [ ] Your completed Tasks and Tests.
- [ ] Any tutor feedback that helped you improve your work.

Use your own evidence

Your report must describe your own completed work and your own learning experience. Do not copy another student's reflection or claim evidence from a Task that is not marked Complete.

2. Decide Which Grade You Can Apply For

Choose your target grade from your actual results. Only Tasks marked Complete count toward your final result.

Target grade	Learning Summary	Test requirements	Task requirements
Pass	Part 1	Test 1 and Test 2: at least 10/20 each	At least 4 Pass Tasks Complete
Credit	Part 1	Test 1 and Test 2: at least 10/20 each	At least 8 Tasks Complete, including 4 Pass Tasks
Distinction	Parts 1 and 2	Test 1 and Test 2 passed on the first attempt; Test 3 at least 2.5/5	11 Tasks Complete
High Distinction	Parts 1, 2 and 3	Test 1 and Test 2 passed on the first attempt; Test 3 at least 2.5/5	12 Tasks Complete

Check your eligibility

- [ ] How many Pass Tasks are marked Complete?
- [ ] How many Tasks are marked Complete in total?
- [ ] Did you achieve at least 10/20 in Test 1?
- [ ] Did you achieve at least 10/20 in Test 2?
- [ ] For Distinction or High Distinction: did you pass Test 1 and Test 2 on the first attempt?
- [ ] For Distinction or High Distinction: did you achieve at least 2.5/5 in Test 3?

Do not guess your target grade

Select one grade only. Your selection must match your Canvas results and all the requirements in the table above.

3. Complete Page 1: Self-Assessment Details

1	**Update your name and student ID** Replace the placeholder text with your full name and student number. Check the spelling and make sure the same details appear throughout the report.

2	**Select one target grade** Tick Pass, Credit, Distinction, or High Distinction. Do not tick more than one grade.

studeersnel

Downloaded by Gia Hieu Truong Ngoc (giahieutruongngoc@gmail.com)

3	**Complete the checklist for your grade** Tick only the requirements you have met. Where useful, enter the actual number of completed Tasks, for example: “9 Tasks Complete.”

4	**Delete all blue instruction boxes** After following each instruction, remove the blue boxes and all placeholder text. The final report must look complete and ready for marking.

4. Complete Page 2: Comments and Declaration

Comments section

Write a short, factual statement explaining why you meet the requirements for your selected grade. Use your actual results.

Declaration section

- Read the declaration carefully.
- Confirm that the report is your individual work.
- Do not copy another student’s reflection.
- Acknowledge any external sources where required.
- Add your name or signature in the space provided.

5. Complete Part 1: Explain Your Learning

The key writing formula

Task or Test -> What you did -> Which ILO it demonstrates -> What you learnt or improved

For each Intended Learning Outcome (ILO), explain the evidence. Do not only list Task numbers.

WEAK EXAMPLE

Task 2 demonstrates ILO 1.

STRONG EXAMPLE

Task 2 demonstrates my understanding of tables, primary keys, foreign keys and relationships. In this task, I created related tables and used queries to retrieve selected records. This helped me understand how relational databases organise and connect data.

Evidence must be real

Use only Tasks and Tests that you actually completed. Do not claim that a Task demonstrates your learning if it is marked Incomplete or was not attempted.

6. What Evidence Can You Use for Each Topic Area?

A. Access and Power BI

The template suggests using Tasks 1 and 2 and Test 1. You may discuss:

- Tables, records, data types, primary keys and foreign keys
- Relationships and queries
- Importing, storing and retrieving data
- Forms, reports, charts, filters and dashboards
- Turning a practical scenario into a structured database design

EXAMPLE - ILO 1

Task 2 helped me understand how primary and foreign keys connect related tables. Creating relationships in Access showed me how data can be separated into different tables while still being retrieved together.

EXAMPLE - ILO 2

Task 1 demonstrated my ability to import and visualise data using Power BI. I created appropriate charts and applied filters so users could examine different parts of the dataset.

EXAMPLE - ILO 3

In Task 2, I identified the required tables, selected appropriate keys and created relationships. This demonstrated my ability to turn a practical scenario into a structured database design.

B. SQL and ERDs

The template suggests using Tasks 3 and 4 and Test 2. You may discuss:

- Select statements, filtering and sorting
- Joins, boolean conditions, grouping and aggregation
- Entities, attributes, primary keys and foreign keys
- Cardinality, optionality and relationship rules
- Resolving many-to-many relationships with an associative entity

EXAMPLE - SQL

Task 3 developed my ability to retrieve data from multiple tables. I used joins to combine related records and WHERE conditions to return only the required results.

EXAMPLE - ERD

The ERD activities helped me understand how to identify entities and define relationships. I also learnt that a many-to-many relationship normally needs to be resolved through an associative entity.

C. Normalisation, Transactions and JSON

The template connects these topics to ILO 4. You may explain:

- How normalisation reduces duplication and improves consistency
- How transactions protect the reliability of database operations
- How json represents semi-structured data
- How modern analytics tools affect database design, use and management

EXAMPLE

The normalisation activities helped me understand how a database can reduce repeated data and improve consistency. Working with JSON also showed me that modern systems may use semi-structured data as well as traditional relational tables.

7. Write a Meaningful Reflection

Reflection formula

Experience -> Why it happened -> What you learnt -> What you will do next

A reflection explains how your understanding or ability changed. It is more than a description of the topic.

WEAK EXAMPLE

SQL was difficult.

studeersnel

Downloaded by Gia Hieu Truong Ngoc (giahieutruongngoc@gmail.com)

STRONG EXAMPLE

I found SQL joins challenging because I initially had difficulty identifying which tables should be connected. Reviewing the ERD and checking the primary and foreign keys helped me select the correct join. In future tasks, I will examine the table relationships before writing the query.

How to answer each reflection prompt

Prompt	What to include	Short example
The most important things I learnt	Explain the key idea or skill and why it mattered to you.	The most important thing I learnt was how database design, querying and visualisation are connected.
Topics I found challenging	State the difficulty, explain why, and describe how you responded.	I found joins challenging because I was unsure which keys should be connected.
Topics I found interesting	Explain what interested you and what you discovered.	I found Power BI interesting because filters allowed users to explore the same dataset in different ways.
Topics I learnt well	Refer to evidence from a completed Task or Test.	My completed SQL Tasks show that I can use WHERE and ORDER BY correctly.
Areas I still need to improve	Be honest and identify a practical next step.	I need more practice with optionality and complex many-to-many relationships in ERDs.
What helped me most	Identify a resource, activity or feedback and explain its value.	Tutor feedback helped me identify why my original query did not return the correct results.
How this unit will help me	Connect the learning to future study or work.	SQL and data modelling will support future IT units and work with information systems.
What I would do differently	State a realistic change to your learning process.	I would start Tasks earlier and test each query in smaller stages before submission.

8. Part 2: Distinction Students Only

Complete Part 2 only if you are eligible for and applying for Distinction. Reflect on Test 3 and the Distinction Task.

Suggested structure

1	**Explain your approach** What did the task require? How did you begin?

2	**Identify a challenge or unexpected issue** What was difficult, interesting, inspiring or different from your expectations?

3	**Explain your problem-solving process** What steps, concepts or techniques helped you manage the problem?

4	**State your learning and future application** What did you learn, and how can you use this approach again?

9. Part 3: High Distinction Students Only

Complete Part 3 only if you are eligible for and applying for High Distinction. Focus on independent learning beyond the unit requirements.

- Explain what you explored beyond the required Tasks.
- Explain why the topic was useful or important.
- Identify what you plan to study independently next.
- Show how the ideas can transfer to another subject, project or career context.

10. Common Mistakes to Avoid

Mistake	What to do instead
Selecting a grade without meeting every requirement	Check your Canvas results before selecting your target grade.
Counting an Incomplete Task	Only Tasks marked Complete count.
Listing Task numbers without explanation	Explain what you did, which ILO it supports, and what you learnt.
Writing only a summary of unit topics	Include challenges, improvement, learning and future action.
Copying another student's reflection	Write from your own experience and evidence.
Leaving blue boxes, prompts or "..." in the template	Delete all instructions and unfinished placeholder text.
Using the wrong unit name in the introduction	Replace "INF10002 Database Analysis and Design" with "INF10025 - Data Management and Analytics."
Completing Part 2 or Part 3 when not required	Complete only the parts required for your eligible target grade.

11. Final Submission Checklist

- [ ] My full name and student ID are correct.
- [ ] I selected one target grade only.
- [ ] My selected grade matches my Canvas results.
- [ ] I completed the correct checklist.
- [ ] I wrote a clear Comments statement.
- [ ] I completed and signed the Declaration.
- [ ] I completed Part 1.
- [ ] Each ILO includes specific evidence from my completed work.
- [ ] I explained what I did and what I learnt.
- [ ] My reflection discusses challenges, improvement and future action.
- [ ] I completed Part 2 if I am applying for Distinction.
- [ ] I completed Parts 2 and 3 if I am applying for High Distinction.
- [ ] I deleted all blue instruction boxes and bracketed prompts.
- [ ] I removed all placeholder text, unfinished bullets and "..." marks.
- [ ] I changed the incorrect unit name to "INF10025 - Data Management and Analytics."
- [ ] I checked spelling, grammar, headings and formatting.
- [ ] I saved, closed and reopened the file for one final check before submission.

Final check from the marker's point of view

The marker should be able to see clearly: the grade you are applying for, the evidence that supports it, what you learnt, how your skills developed, and what you still need to improve.
